FunnelTrace AI

From Campaign Exposure to Revenue Impact.

Enterprise Marketing Analytics, Multi-Touch Attribution & Revenue Leakage Audit

REPORT DETAILS & METADATA

Report Type: FULL INTELLIGENCE AUDIT

Active Attribution: Linear

Generation Date: 28 Oct 2026

Dataset Records: 1,250 customer events

Data Status: Deterministic Synthetic Sample

Date Range: Nov 2025 to Apr 2026

Channel Filter: all

Segment Filter: all

Status Filter: all

EXECUTIVE AUDIT SUMMARY

- Management problem addressed: High lead generation (595 leads) paired with lower-than-expected commercial conversion (62 conversions).
- Total portfolio marketing spend of ₹32,74,814 delivered ₹8,11,37,004 in attributed revenue (24.78x ROAS).
- Identified 2 revenue leakage bottlenecks with an estimated potential leakage impact of ₹68,76,055.
- Lead qualification and SDR discovery handoffs represent the primary margin vulnerability across broad acquisition campaigns.

Notice: Prototype demonstration — all generated records, attribution weights, and leakage findings are illustrative sample data.

7-STAGE MARKETING-TO-REVENUE FUNNEL

Identifies absolute volume progression, step conversion %, and drop-off rate between stages.

KEY FUNNEL BOTTLENECK OBSERVATIONS

1. Highest Volume Loss: Stage 2 (Clicks) to Stage 3 (Leads) exhibits significant top-of-funnel friction.
2. Critical Quality Disconnect: Only 55.5% of captured leads meet sales qualification criteria, confirming initial management problem.
3. Commercial Close Efficiency: 32.1% of active opportunities successfully convert into closed-won revenue deals.

CHANNEL ATTRIBUTION MODEL COMPARISON TABLE

Marketing Channel	Spend	First-Touch Rev	Last-Touch Rev	Linear Rev	ROAS (Linear)	Est. Gross Profit

ATTRIBUTION RECONCILIATION & GOVERNANCE NOTES

- Total Eligible Revenue from Converted Customers: ₹8,11,37,004 across 62 converted accounts.
- Reconciled Total Credited Revenue: ₹8,11,37,004 (Zero double-counting guaranteed across multi-touch customer records).
- Non-Causal Disclaimer: Attribution models represent rule-based accounting allocations of historical outcomes. They do not demonstrate causal lift or counterfactual increments.

IDENTIFIED REVENUE LEAKAGE VULNERABILITIES

HIGH **Severe Sales Disqualification in "Viral Free Tool Ebook Blast"** Est. Leakage: ¹66,38,48

Scope: Viral Free Tool Ebook Blast (Paid Social) | Stage: Leads ⁉ Sales-Qualified Leads

Business Risk: High volume of unqualified prospects suggests audience misalignment, poor gating incentives, or misleading ad copy.

Recommended Action: Audit ad messaging, tighten form qualification fields, and introduce firmographic lead scoring filters before passing leads to SDRs.

MEDIUM **High Customer Acquisition Cost on Paid Social** Est. Leakage: ¹2,37,573

Scope: Paid Social | Stage: Channel Unit Economics

Business Risk: Bidding dynamics or low conversion rates on this channel inflate blended customer acquisition costs, threatening margin health.

Recommended Action: Cap target CPA bidding in campaign settings and shift marginal budget into channels with lower unit acquisition costs.

RULE-BASED STRATEGIC ACTION RECOMMENDATIONS

[FUNNEL OPTIMIZATION] Largest volume loss occurs at "Engaged Clicks" with 1,09,727 units dropped.

Evidence: Drop-off rate: 93.2% | Step Conversion: 6.8%

Prescribed Action: Focus cross-functional optimization sprints on Engaged Clicks. Streamline transition criteria, audit friction points, and provide immediate response SLAs.

[BUDGET REALLOCATION] Substantial ROAS disparity between Organic Search (75.79x) and Paid Social (8.15x).

Evidence: Organic Search ROAS: 75.79x vs Paid Social ROAS: 8.15x

Prescribed Action: Gradually reallocate 20–30% of Paid Social budget into Organic Search, monitoring marginal CPA and lead saturation.

[CHANNEL STRATEGY] "Enterprise" customer segment demonstrates superior unit economics with 56.90x ROAS.

Evidence: Segment ROAS: 56.90x | Win Deals: 34

Prescribed Action: Build account-based marketing (ABM) lists specifically tailored to Enterprise profiles and create custom case studies.

WHAT-IF SCENARIO SIMULATION OUTCOMES

Metric	Current Value	Simulated Value	Net Delta	% Change
Total Marketing Spend	¹32,74,814	¹32,74,814	¹0	0.0%
Estimated Leads Generated	595	597	2	0.3%
Sales-Qualified Leads (SQL)	330	331	1	0.2%
Customer Conversions	62	85	23	37.5%
Estimated Attributed Revenue	¹8,11,37,004	¹8,12,19,916	¹82,912	0.1%
Cost per Acquisition (CPA)	¹52,820	¹38,420	-¹14,400	-27.3%
Revenue-to-Spend Ratio (ROAS)	24.78x	24.80x	0.03x	0.1%

METHODOLOGY, FORMULAS & ANALYTICAL LIMITATIONS

- Marketing ROI: Calculated as ((Attributed Revenue - Total Spend) / Total Spend) * 100.
- Lead-to-Customer Rate: Calculated as (Total Conversions / Effective Leads) * 100.
- Linear Attribution: Evenly credits deal revenue across all recorded customer touchpoints, guaranteeing sum reconciliation.
- Limitations: Attribution models describe past association; they do not establish causal incrementality. Simulated outcomes are illustrative scenario estimates.
