Advisory: Forecasts utilize power-law diminishing returns curves with channel elasticity β exponents (0.58 to 0.82) to prevent over-allocation to saturated channels.

Display Advertising Operating at Net Marketing Deficit

High Priority

Finding: Display Advertising generated ₹66.56 L in revenue (1.55x ROAS), but resulted in a net loss of -₹8.31 L after deducting marketing spend from product gross margin.

Action: Curtail spend on underperforming Display Advertising campaigns by 30-50%, or renegotiate publisher CPMs and increase minimum cart thresholds to restore profitability.

Email Marketing Demonstrates Superior Margin with Minimal Budget

High Priority

Finding: Email Marketing captures only 4.3% of the total budget, yet delivers an exceptional net marketing profit margin of 50.9% and 8.80x ROAS.

Action: Increase Email Marketing allocation by 30-50% to expand triggered lifecycle flows, automated browse abandonment, and VIP retention segments.

Excessive Acquisition Cost in "Programmatic Display - Broad Demographic Awareness"

High Priority

Finding: Campaign "Programmatic Display - Broad Demographic Awareness" has absorbed ₹17.24 L with an elevated CPA of ₹1,703 (35%+ higher than aggregate portfolio CPA of ₹1,012).

Action: Audit search terms or targeting criteria. Narrow audience exclusions, test refreshed ad creatives, or redirect budget to higher-performing peer campaigns.

Calculation Definitions & Limitations

- **ROAS:** Attributed Revenue ÷ Marketing Spend. Indicates gross sales multiple only.
- **Net Profit Contribution:** Gross Profit Before Marketing – Marketing Spend. Represents actual cash contribution before corporate overheads.
- **CPA:** Marketing Spend ÷ Conversions. Average cost to acquire an order.
- **Optimization Engine:** Deterministic multi-criteria scoring model with power-law diminishing marginal returns. No external API keys required.
